A true picture of relationships between the Indians of northern New England and the European settlers. Northern New England, a rugged landscape dotted with transient settlements, posed challenges to the traditional town church in the wake of the American Revolution. Using the methods of spatial geography, Shelby M. Balik examines how migrants adapted their understanding of religious community and spiritual space to survive in the harsh physical surroundings of the region. The notions of boundaries, place, and identity they developed became the basis for spreading New England's deeply rooted spiritual culture, even as it opened the way to a new evangelical age. Historic towns and cities and natural wonders of northern New England. Years before Jamestown was settled, European adventurers and explorers landed on the shores of Maine, New Hampshire, and Massachusetts in search of fame, fortune, and souls to convert to Christianity. Unbeknownst to them all, the "New World" they had found was actually a very old one, as the history of the native people spanned 10,000 years or more.

This work is a compilation of old and new essays written by present-day archeologists, by explorers and missionaries who were in direct contact with the Indians, and by scholars over the last three centuries. The essays are in three sections: Prehistory, which concentrates on the Paleo-Indian, Archaic, and Woodland phases of the native heritage, the Contact Era, which deals with the explorers and their experiences in the New World, and Collections, Sites, Trails, and Names, which focuses on various dedications to the native population and significant names (such as the Massabesic Trail and the Cohas Brook site). According to this innovative study, the conservation movement that eventually took hold throughout America had its roots among the communitarian ethic of New England countryfolk, rather than urban intellectuals or politicians. Judd tells us that ordinary people, struggling to define and redefine the morality of land and resource use, contributed immensely to America's conservation legacy. 3 maps. 24 photos. A *New York Times* Editor's Choice "This book is an original achievement, the kind of history that chastens our historical memory as it makes us wiser." —David W. Blight Finalist for the Pulitzer Prize Widely hailed as a "powerfully written" history about America's beginnings (Annette Gordon-Reed), *New England Bound* fundamentally changes the story of America's seventeenth-century origins. Building on the works of giants like Bernard Bailyn and Edmund S. Morgan, Wendy Warren has not only "mastered that scholarship" but has now rendered it in "an original way, and deepened the story" (*New York Times* Book Review). While earlier histories of slavery largely confine themselves to the South, Warren's "panoptical exploration" (*Christian Science Monitor*) links the growth of the northern colonies to the slave trade and examines the complicity of New England's leading families, demonstrating how the region's economy derived its vitality from the slave trading ships coursing through its ports. And even while *New England Bound* explains the way in which the Atlantic slave trade drove the colonization of New England, it also brings to light, in many cases for the first time ever, the lives of the thousands of reluctant Indian and African slaves who found themselves forced into the project of building that city on a hill. We encounter enslaved Africans working side jobs as con artists, enslaved Indians who protested their banishment to sugar islands, enslaved Africans who set fire to their owners' homes and goods, and enslaved Africans who saved their owners' lives. In Warren's meticulous, compelling, and hard-won recovery of such forgotten lives, the true variety of chattel slavery in the Americas comes to light, and *New England Bound* becomes the new standard for understanding colonial America. Presents a complete list of streamliner trains from 1933 to 1942. Includes early experiments in the evolution of semi-streamlining, the pioneers, the middle years, the zenith and decline, the conversions and more--the entire story. *Canning Gold* is a meticulously researched examination of how sweet corn canning helped shape the economy, landscape and people of rural Maine, New Hampshire and Vermont during the "corn shop century," 1860-1960's. Paul Frederic powerfully demonstrates the strong community bond essential for the industry's initial success. Interviews with farmers, factory owners and cannery workers who raised and packed the corn, combined with the written record, and Frederic's insight derived from growing up in the shadow of a corn shop, enrich the work and trace various threads linking local patterns

to regional, national and global forces. Detailed descriptions and maps of forty of the best bicycle rides in Northern New England, from easy afternoon jaunts to multi-day tours. A significant addition to the growing field of transnational studies, *New England and the Maritime Provinces* reveals a relationship that, although sometimes troubled, retains its importance in the current era of globalization. This enthralling work of scholarship strips away abstractions to reveal the hidden--and not always stoic--face of the "goodwives" of colonial America. In these pages we encounter the awesome burdens--and the considerable power--of a New England housewife's domestic life and witness her occasional forays into the world of men. We see her borrowing from her neighbors, loving her husband, raising--and, all too often, mourning--her children, and even attaining fame as a heroine of frontier conflicts or notoriety as a murderess. Painstakingly researched, lively with scandal and homely detail, *Good Wives* is history at its best. Say "New England" and you likely conjure up an image in the mind of your listener: the snowy woods or stone wall of a Robert Frost poem, perhaps, or that quintessential icon of the region--the idyllic white village. Such images remind us that, as Joseph C. The hurricane that pummeled the northeastern United States on September 21, 1938, was New England's most damaging weather event ever. To call it "New England's Katrina" might be to understate its power. Without warning, the

storm plowed into Long Island and New England, killing hundreds of people and destroying roads, bridges, dams, and buildings that stood in its path. Not yet spent, the hurricane then raced inland, maintaining high winds into Vermont and New Hampshire and uprooting millions of acres of forest. This book is the first to investigate how the hurricane of '38 transformed New England, bringing about social and ecological changes that can still be observed these many decades later. The hurricane's impact was erratic—some swaths of forest were destroyed while others nearby remained unscathed; some stricken forests retain their prehurricane character, others have been transformed. Stephen Long explores these contradictions, drawing on survivors' vivid memories of the storm and its aftermath and on his own familiarity with New England's forests, where he discovers clues to the storm's legacies even now. *Thirty-Eight* is a gripping story of a singularly destructive hurricane. It also provides important and insightful information on how best to prepare for the inevitable next great storm. The first and only full-scale technical and stylistic analysis of 200 years of architectural evolution in northern New England. *High Lean Country* captures the rich history and haunting character of the New England region of northern New South Wales. The authors explore how memory - of land, of family, of patterns of life on the other side of the world - has influenced the identity of New England. They also consider how the high country itself has shaped its people and their sense of regional uniqueness. In doing so, this book sets a new direction for understanding Australia as a whole. Weaving together the histories of human settlement, economic, social and cultural development, as well as interactions with the environment, *High Lean Country* shows how colonial settlers strived for decades to literally create a new England. It traces the story of the graduates of Oxford and Cambridge who turned their hands to sheep husbandry and developed a squattocracy, the establishment of schools and other institutions, and the cultivation of traditional arts. It also examines the early colonial bushranging period, and a history of not always friendly relations between white settlers and the local Aboriginal population. A project of the Heritage Futures Research Centre at the University of New England, *High Lean Country* is a fascinating study of this distinctive Australian high country. Describes over 100 trout-water streams and rivers in New Hampshire, Vermont, and Maine, and provides maps, access directions, and suggestions for effective trout-fishing.
