Architecture and Disjunction Jun 18 2022 Avant-garde theorist and architect Bernard Tschumi is equally well known for his writing and his practice. Architecture and Disjunction, which brings together Tschumi's essays from 1975 to 1990, is a lucid and provocative analysis of many of the key issues that have engaged architectural discourse over the past two decades—from deconstructive theory to recent concerns with the notions of event and program. The essays develop different themes in contemporary theory as they relate to the actual making of architecture, attempting to realign the discipline with a new world culture characterized by both discontinuity and heterogeneity. Included are a number of seminal essays that incited broad attention when they first appeared in magazines and journals, as well as more recent and topical texts. Tschumi's discourse has always been considered radical and disturbing. He opposes modernist ideology and postmodern nostalgia since both impose restrictive criteria on what may be deemed "legitimate" cultural conditions. He argues for focusing on our immediate cultural situation, which is distinguished by a new postindustrial "unhomeliness" reflected in the ad hoc erection of buildings with multipurpose programs. The condition of New York and the chaos of Tokyo are thus perceived as legitimate urban forms.

Architecture and the Historical Imagination Sep 09 2021

Hailed as one of the key theoreticians of modernism, Eugène-Emmanuel Viollet-le-Duc was also the most renowned restoration architect of his age, a celebrated medieval archaeologist and a fervent champion of Gothic revivalism. He published some of the most influential texts in the history of modern architecture such as the *Dictionnaire raisonné de l'architecture française du XIe au XVIe siècle* and *Entretiens sur l'architecture*, but also studies on warfare, geology and racial history. Martin Bressani expertly traces Viollet-le-Duc's complex intellectual development, mapping the attitudes he adopted toward the past, showing how restoration, in all its layered meaning, shaped his outlook. Through his life journey, we follow the route by which the technological subject was born out of nineteenth-century historicism.

Essays in Architectural Criticism Mar 15 2022 This collection of 17 of Alan Colquhoun's essays marks a watershed in the development of architectural thinking over the past three decades, comprising a virtual theory of Modernism in architecture.

History of Architecture May 17 2022 In a continuously running stream of events, *The History of Architecture* pieces together humankind's building prowess from 10,000 BCE, when humans began creating basic shelters from twigs and leaves, through to the wondrous feats of today, visible in futuristic skyscrapers and towers of concrete, steel and glass. It covers religious and secular architecture, including places of worship, royal buildings, forts, commercial

complexes, bridges, industrial buildings, transportation hubs and residences. Discover styles and sub-styles, ranging across civilisations and geographies through biographies, with great masters like Brunelleschi and Frank Lloyd Wright, whose works are considered landmarks of architectural achievement. A famous architect once said, 'Ideally all buildings should be visited'. Practically impossible as that is, many of the more stupendous edifices can be `visited' through the pages of this book.

Travels in the History of Architecture Jun 25 2020 Mies van der Rohe, master of modern architecture, declared that “Architecture starts when you carefully put two bricks together.” In *Travels in the History of Architecture*, renowned architectural writer Robert Harbison takes a closer look at these bricks, providing an engaging and concise companion to the great themes and aesthetic movements in architecture from antiquity to the present day. *Travels in the History of Architecture* begins its journey with the great temples of the Egyptians and the shrines of Classical Greece and Rome and then provides a complete survey of architecture through the present day. Each chapter of this dynamic and approachable volume focuses on a movement in architectural history, including Byzantine, Baroque, Mannerism, Historicism, Functionalism, and Deconstruction. Unique to this work is Harbison’s wide-ranging approach, which draws on references and examples outside of architecture—from literature, art, sculpture, and history—to further illustrate and contextualize the themes and ideas of each period. For example, the travel writing of Pausanias illustrates the

monuments of ancient Greece, a poem in praise of marble decoration reveals how the builders of the cathedral of Hagia Sophia viewed their creation, and a French rococo painting speaks to the meaning behind the design of the English landscape garden. Original, yet authoritative, *Travels in the History of Architecture* will be an indispensable guide for everyone curious to know more about the world's most famous structures, as well as for students of art and architectural history seeking a definitive introduction.

A History of Architecture and Urbanism in the Americas Aug 28 2020 *A History of Architecture and Urbanism in the Americas* is the first comprehensive survey to narrate the urbanization of the Western Hemisphere, from

the Arctic Circle to Antarctica, making it a vital resource to help you understand the built environment in this part of the world. The book combines the latest scholarship about the indigenous past with an environmental history approach covering issues of climate, geology, and biology, so that you'll see the relationship between urban and rural in a new, more inclusive way. Author Clare Cardinal-Pett tells the story chronologically, from the earliest-known human migrations into the Americas to the 1930s to reveal information and insights that weave across time and place so that you can develop a complex and nuanced understanding of human-made landscape forms, patterns of urbanization, and associated building typologies. Each chapter addresses developments throughout the hemisphere and includes information from various disciplines, original artwork, and historical photographs of everyday life, which - along with numerous maps, diagrams, and traditional building photographs - will train your eye to see the built environment as you read about it.

A History of Architecture and Trade Dec 20 2019 A History of Architecture and Trade draws together essays from an international roster of distinguished and emerging scholars to critically examine the important role architecture and urbanism played in the past five hundred years of global trading, moving away from a conventional Western narrative. The book uses an alternative holistic lens through which to view the development of architecture and trade, covering diverse topics such as the coercive urbanism of the Dutch East India Company; how slavery and capitalism shaped

architecture and urbanization; and the importance of Islamic trading in the history of global trade. Each chapter examines a key site in history, using architecture, landscape and urban scale as evidence to show how trade has shaped them. It will appeal to scholars and researchers interested in areas such as world history, economic and trade history and architectural history.

The Architecture of Historic Rockbridge Jan 01 2021 This abundantly illustrated, wide-ranging volume captures the rich and diverse architectural history of Rockbridge County, Virginia, including the two cities of Lexington and Buena Vista. While recent books have documented the area's social history, this book fills a long-recognized void by tracing the area's architectural heritage, from the eighteenth century to the post-World War II period. Beginning with early log and stone structures on what was once Virginia's frontier, the discussion moves on to the brick construction of the late eighteenth and early nineteenth centuries that produced some of the finest Federal homes in the Valley of Virginia. The book covers the many styles that would follow, often with their own vernacular interpretation. The Architecture of Historic Rockbridge is an enormously useful companion to The Architecture of Historic Lexington, itself an invaluable resource now for forty years. Including discussions of towns, schools, churches, resorts, and industrial buildings, the new volume will satisfy the scholarly, while presenting architectural analysis in an engaging manner accessible to a general readership. The book is richly illustrated throughout, with over two hundred color and black-and-white

photographs (including the work of internationally recognized photographer Sally Mann), line drawings, and historic maps. Distributed for the Historic Lexington Foundation

Graphic History of Architecture May 05 2021 This pictorial survey of Western architecture, covering ancient Egyptian times to the present, contains two thousand drawings of buildings, ground plans, and architectural details. The book includes maps, time-charts, and a very brief text.

Architecture History, Theory and Preservation Feb 14 2022 Architecture History, Theory and Preservation critically explores the historic development, theoretical underpinnings and conservation practices of architecture. Complete with 170 full color images, this volume presents architectural and urban examples, from Prehistory to the Middle Ages, chronologically and thematically examining contextual issues that provide each period with distinctive expressions. The special features, structural systems, materials and construction technologies are analyzed, as well as how the international community deals with the task of interpreting and preserving certain historic properties. This publication provides professors and students of architecture, art history, historic preservation and related fields with an integrated view of architecture using historical, theoretical and conservation perspectives. As an architect, architectural historian and preservationist herself, Dr Pabón-Charneco weaves a field of relationships regarding each building, creating a silent yet empowering bridge between past and present.

American Architecture Jan 25 2023 More than fifteen years

after the success of the first edition, this sweeping introduction to the history of architecture in the United States is now a fully revised guide to the major developments that shaped the environment from the first Americans to the present, from the everyday vernacular to the high style of aspiration. Eleven chronologically organized chapters chart the social, cultural, and political forces that shaped the growth and development of American towns, cities, and suburbs, while providing full description, analysis, and interpretation of buildings and their architects. The second edition features an entirely new chapter detailing the green architecture movement and architectural trends in the 21st century. Further updates include an expanded section on Native American architecture and contemporary design by Native American architects, new discussions on architectural education and training, more examples of women architects and designers, and a thoroughly expanded glossary to help today's readers. The art program is expanded, including 640 black and white images and 62 new color images. Accessible and engaging, *American Architecture* continues to set the standard as a guide, study, and reference for those seeking to better understand the rich history of architecture in the United States.

The Architecture of Art History Feb 02 2021 What is the place of architecture in the history of art? Why has it been at times central to the discipline, and at other times seemingly so marginal? What is its place now? Many disciplines have a stake in the history of architecture – sociology, anthropology, human geography, to name a few. This book deals with perhaps the most influential tradition of all – art history – examining how the relation between the disciplines of art history and architectural history has waxed and waned over the last one hundred and fifty years. In this highly original study, Mark Crinson and Richard J. Williams point to a decline in the importance attributed to the role of architecture in art history over the last century – which has happened without crisis or self-reflection. The book explores the problem in relation to key art historical approaches, from formalism, to feminism, to the social history of art, and in key institutions from the Museum of Modern Art, to the journal *October*. Among the key thinkers explored are Banham, Baxandall, Giedion, Panofsky, Pevsner, Pollock, Riegl, Rowe, Steinberg, Wittkower and Wölfflin. The book will provoke debate on the historiography and present state of the discipline of art history, and it makes a powerful case for the reconsideration of architecture.

A History of American Architecture Dec 24 2022 Why

did the colonial Americans give over a significant part of their homes to a grand staircase? Why did the Victorians drape their buildings ornate decoration? And why did American buildings grow so tall in the last decades of the 19th century. This book explores the history of American architecture from prehistoric times to the present, explaining why characteristic architectural forms arose at particular times and in particular places.

Authenticity in the Preservation of Historical Wooden

Architecture - Problems and Challenges Jul 27 2020

Historical wooden architecture is one of the most unique types of heritage built. Built from organic material, wooden buildings remain in harmony with the natural environment and fascinate future generations with its special charm. Because of its uniqueness, wooden buildings reflect the richness of traditional building solutions developed in different parts of the world. At the same time, this type of building contains the spiritual values that were important to those who built these architectural structures. The main topics of 'Authenticity in Preserving Historical Wooden Architecture - Problems and Challenges' are: (i) The method of protection and preservation of wooden buildings as a form of specific historical interpretation; (ii) The question of reconstruction and translocation of a wooden historical building with regard to the level of authenticity; (iii) The analysis of the essence of historical changes and the methods for maintaining and displaying wooden structures in relation to the requirements that determine their historical and architectural authenticity. Showing a variety of aspects of authenticity of wooden

buildings, all demonstrated by specific examples (case studies), 'Authenticity in Preserving Historical Wooden Architecture - Problems and Challenges' presents practical implementations of theoretical findings. Hence, the book contributes to the understanding of wooden architectural heritage from a new perspective. The book will be of particular interest to academics and professionals interested in or involved in the preservation of built wooden heritage.

Architecture of First Societies Jul 07 2021 “This book is the most comprehensively global and critically sensitive synthesis of what we now know of the material and socio-cultural evolution of the so-called First Societies. Written by a distinguished architectural historian and theorist, this truly remarkable and indispensable study shows how the material culture of our forebears, from building to clothing, food, ritual and dance, was inextricably bound up with the mode of survival obtained in a particular place and time...It is a study that will surely become required reading for every student of material culture.”—Kenneth Frampton Starting with the dawn of human society, through early civilizations, to the pre-Columbian American tribes, *Architecture of First Societies: A Global Perspective* traces the different cultural formations that developed in various places throughout the world to form the built environment. Looking through the lens of both time and geography, the history of early architecture is brought to life with full-color photographs, maps, and drawings. Drawing on the latest research in archaeological and anthropological knowledge, this landmark book also looks at how indigenous

societies build today in order to help inform the past.

Architecture Re-assembled Jan 21 2020 Beginning from the rise of modern history in the eighteenth century, this book examines how changing ideas in the discipline of history itself has affected architecture from the beginning of modernity up to the present day. It reflects upon history in order to encourage and assist the reader in finding well-founded principles for architectural design. This is not simply another history of architecture, nor a 'history of histories'. Setting buildings in their contemporaneous ideas about history, it spans from Fischer von Erlach to Venturi and Rossi, and beyond to architects working in the fallout from both the Modern Movement – Aalto, Louis Kahn, Aldo van Eyck – and Post-modernism – such as Rafael Moneo and Peter Zumthor. It shows how Soane, Schinkel and Stirling, amongst others, made a meaningful use of history and contrasts this with how a misreading of Hegel has led to an abuse of history and an uncritical flight to the future. This is not an armchair history but a lively discussion of our place between past and future that promotes thinking for making.

American Architectural History Feb 26 2023 This book presents a collection of recent writings on architecture and urbanism in the United States, with topics ranging from colonial to contemporary times.

The Architecture of Concepts Apr 16 2022 The Architecture of Concepts proposes a radically new way of understanding the history of ideas. Taking as its example human rights, it develops a distinctive kind of conceptual analysis that enables us to see with precision how the

concept of human rights was formed in the eighteenth century. The first chapter outlines an innovative account of concepts as cultural entities. The second develops an original methodology for recovering the historical formation of the concept of human rights based on data extracted from digital archives. This enables us to track the construction of conceptual architectures over time. Having established the architecture of the concept of human rights, the book then examines two key moments in its historical formation: the First Continental Congress in 1775 and the publication of Tom Paine's *Rights of Man* in 1792. Arguing that we have yet to fully understand or appreciate the consequences of the eighteenth-century invention of the concept "rights of man," the final chapter addresses our problematic contemporary attempts to leverage human rights as the most efficacious way of achieving universal equality.

History of Modern Architecture Oct 10 2021 A serious and original study of the beginnings and development of modernism in which the pictorial aspects are designed to aid in the communication of the author's closely reasoned formulations. Let it be said at once that the format of this work is richly handsome: it is a two-volume boxed set comprising 844 pages and well over 1,000 high-quality illustrations, and it reflects throughout its publisher's conviction that good design is an essential, not superficial, part of bookmaking. Beyond that, it should be emphasized that this work is not another facile cultural tour of modern architecture. It is a serious and original study of the beginnings and development of modernism in which the pictorial aspects are designed to

aid in the communication of the author's closely reasoned formulations, rather than to gloss over a lack of substantive content. The book is a translation of the third Italian edition, published in 1966. Benevolo, who is on the faculty of architecture in Venice, has earned an international reputation as a historian of architecture and town planning, and his publications embrace the span of time from the Renaissance to the foreseeable future. One such publication, *The Origins of Modern Town Planning* (The MIT Press, 1967), may be read as a prelude to the present work as well as an independent contribution. Perhaps more than any other architectural historian in our time, Benevolo has made a determined effort to place developments in design and planning in their proper social and political settings. Indeed, the author argues that the development of the modern movement in architecture was determined, not by aesthetic formalisms, but largely by the social changes that have occurred since about 1760: "After the middle of the eighteenth century, without the continuity of formal activity being in any way broken, indeed while architectural language seems to be acquiring a particular coherence, the relations between architect and society began to change radically.... New material and spiritual needs, new ideas and modes of procedure arise both within and beyond the traditional limits, and finally they run together to form a new architectural synthesis that is completely different from the old one. In this way it is possible to explain the birth of modern architecture, which otherwise would seem completely incomprehensible...." This second volume is concerned with the modern movement

proper, from 1914 to 1966. The author emphasizes the unity of the movement, rejecting the usual treatment that allots to the individual architects separate and unconnected biographical accounts. Benevolo remarks at one point, "When one talks about modern architecture one must bear in mind the fact that it implies not only a new range of forms, but also a new way of thinking, whose consequences have not yet all been calculated." His main concern is to provide a more exact calculation of those consequences.

Architecture and the Late Ottoman Historical Imaginary Apr 23 2020 While European eclecticism is examined as a critical moment in western art history, little research has been conducted in the historicist pursuits of late Ottoman architects as they negotiated the nineteenth century's vast inventory of styles and embarked on a revivalist/Orientalist program they identified as the 'Ottoman Renaissance.' Ersoy's book examines the complex historicist discourse underlying this 'renaissance' through a close reading of a text conceived as the movement's canonizing manifesto: the *Usul-i Mi'mari-i 'Osmani*.

The Architecture and Landscape of Health Mar 23 2020

The *Architecture and Landscape of Health* explores buildings and landscapes that were designed to treat or prevent disease in the era before pharmaceuticals and biomedicine emerged as first line treatments. Written from an architectural perspective, it examines the historical relationship between health and place through the emergence of dedicated

therapeutic building types from the late eighteenth to the early twentieth century, a time when the environment was viewed as integral to the health of both the individual and the population. This book provides an overview of ideas surrounding health and place and their impact on architecture and designed landscapes. Different therapeutic buildings and places are examined, including public parks, asylums, sanatoria, leprosaria, quarantine stations, public baths and healthy homes. Each chapter outlines the medical context, common therapies, a history of buildings designed in response to these, and an examination of how such places were perceived to have functioned. Illustrated using geographically and temporally diverse examples, the book includes designs drawn from locations across the world including Europe, the Americas, Africa, Australia and Asia. *The Architecture and Landscape of Health* identifies and examines moments in the conversation between health and design, and is a timely look back on the resultant buildings and places, offering insights which could inform the design of therapeutic places of the future. An ideal read for researchers, academics and upper-level postgraduate students interested in architecture, and architectural history, particularly relating to healthcare design and medical history.

The Cultural Role of Architecture Nov 23 2022 Exploring the ambiguities of how we define the word 'culture' in our global society, this book identifies its imprint on architectural ideas. It examines the historical role of the cultural in architectural production and expression, looking at meaning and communication, tracing the formations of cultural

identities. Chapters written by international academics in history, theory and philosophy of architecture, examine how different modes of representation throughout history have drawn profound meanings from cultural practices and beliefs. These are as diverse as the designs they inspire and include religious, mythic, poetic, political, and philosophical references.

Kissing Architecture Dec 12 2021 Kissing Architecture explores the mutual attraction between architecture and other forms of contemporary art. In this fresh, insightful, and beautifully illustrated book, renowned architectural critic and scholar Sylvia Lavin develops the concept of "kissing" to describe the growing intimacy between architecture and new types of art--particularly multimedia installations that take place in and on the surfaces of buildings--and to capture the sensual charge that is being designed and built into architectural surfaces and interior spaces today. Initiating readers into the guilty pleasures of architecture that abandons the narrow focus on function, Lavin looks at recent work by Pipilotti Rist, Doug Aitken, the firm Diller Scofidio + Renfro, and others who choose instead to embrace the viewer in powerful affects and visual and sensory atmospheres. Kissing Architecture is the first book in a cutting-edge new series of short, focused arguments written by leading critics, historians, theorists, and practitioners from the world of urban development and contemporary architecture and design. These books are intended to spark

vigorous debate. They stake out the positions that will help shape the architecture and urbanism of tomorrow.

Addressing one of the most spectacular and significant developments in the current cultural scene, *Kissing Architecture* is an entertainingly irreverent and disarmingly incisive book that offers an entirely new way of seeing--and experiencing--architecture in the age after representation.

Renaissance Architecture Jan 13 2022 The Renaissance was a diverse phenomenon, marked by innovation and economic expansion, the rise of powerful rulers, religious reforms, and social change. Encompassing the entire continent, *Renaissance Architecture* examines the rich variety of buildings that emerged during these seminal centuries of European history. Although marked by the rise of powerful individuals, both patrons and architects, the Renaissance was equally a time of growing group identities and communities - and architecture provided the public face to these new identities. Religious reforms in northern Europe, spurred on by Martin Luther, rejected traditional church function and decoration, and proposed new models. Political ambitions required new buildings to satisfy court rituals. Territory, nature, and art intersected to shape new landscapes and building types. Classicism came to be the international language of an educated architect and an ambitious patron, drawing on the legacy of ancient Rome. Yet the richness of the medieval tradition continued to be used throughout Europe, often alongside classical buildings.

Examining each of these areas by turn, this book offers a broad cultural history of the period as well as a completely new approach to the history of Renaissance architecture. The work of well-known architects such as Michelangelo and Andrea Palladio is examined alongside lesser known though no less innovative designers such as Juan Guas in Portugal and Benedikt Ried in Prague and Eastern Europe. Drawing on the latest research, it also covers more recent areas of interest such as the story of women as patrons and the emotional effect of Renaissance buildings, as well as the impact of architectural publications and travel on the emerging new architectural culture across Europe. As such, it provides a compelling introduction to the subject for all those interested in the history of architecture, society, and culture in the Renaissance, and European culture in general.
