The shells of these marine mollusks are prized for their amazing variety and extraordinary beauty. The neurotoxic venoms they produce—injected by a hollow, harpoon-like tooth into prey animals that are then paralyzed and swallowed whole—have a range of pharmaceutical applications, from painkillers to antidepressants. This beautifully illustrated book identifies 53 valid species of the southeastern United States and the Caribbean, a region that supports a diverse but taxonomically challenging group of Conus. Introductory chapters cover the evolution and phylogeny of the genus, and notes on methodology are provided. Detailed species accounts describe key identification features, taxonomy, distribution, ecology, toxicology, life history, and evolutionary relationships. The book includes more than 2,100 photos of shells on 109 splendid color plates; more than 100 additional photos, many depicting live animals in color; and 35 color distribution maps. Identifies 53 valid species—the first reassessment of western Atlantic Conus in more than seventy years Features more than 2,100 photos of shells on 109 color plates Blends the traditional shell-character approach to identification with cutting-edge shell and radular tooth morphometrics and molecular genetic analyses Includes color images of live animals as well as color distribution maps The role of gender in the labour force and potential inequalities between men and women have been widely discussed. Despite efforts to align gender roles in recent decades, high levels of inequality are not an exception but rather the standard. These inequalities can lead to the respective minorities' general dissatisfaction, which affects the working atmosphere and ultimately a firm's economic success (Hoogendoorn et al. 2013). Recent quantitative studies confirm this dissatisfaction exists. However, analyses only take place at a country or regional level. Therefore, conclusions can be drawn on an aggregated level, whereas underlying structural differences between individual firms remain undetected. Alternative ways to measure inequalities include qualitative studies for individual companies. However, no generalized inference can be made. Our proposed framework, the Gender Equality Firm Index (GEFI), allows for quantitative gender equality analysis at the company level. GEFI aims to explore the latent and the concrete implementation of gender equality in firms. Specifically, we derive firm-level measurements from large-scale data extraction of firm websites and combine them with official data. We consequently derive a gender equality score for each company, making it possible to draw conclusions at any given level of granularity. We demonstrate the applicability of our framework in a case study including nearly 1 million firms throughout Germany. Thereby, we find that mainly urban and western German firms in sectors such as health and social services comparably enforce gender equality the most, which is in line with the existing literature. The Kenya Gazette is an official publication of the government of the Republic of Kenya. This book is dedicated to my daughter Dania and all kids living with type one diabetes. As Dania started her first grade this year, she realized she is not like the rest of the students in her classroom. She has type one diabetes. She told me that she doesn't like it when the school nurse calls her to the office while she is doing something fun in the classroom. She doesn't want to answer the question that one of her friends normally ask her every time, "why did you go to the nurse again?". The purpose of this story is to educate kids about type one diabetes. This story is also written to encourage kids with type one diabetes to feel that they are not alone, and they are like Dania. The story also encourages students to support their friends with type one diabetes. Thank you for buying my book. I hope your kids enjoy it!

Especially for Parents Who Have Children Living with Type 1 Diabetes. Your child is eligible for special education and related services under the Individuals with Disabilities Education Improvement Act (IDEA). IDEA mandated public schools to provide certain necessary services to students with Type one diabetes. Type one diabetes is covered under Other Health Impairments; It is one of the fourteenth categories that qualify children with type one diabetes and protects them under the U.S. national special education law. Your child cannot be denied access to free public education, which means that the school authority has to make the school accessible for your child with type one diabetes, and make relevant accommodations that are necessary for the educational, social, and emotional comfort of your child in the school environment.
