Jesus Eight Eurocentric Historians Institutional Context of Education Systems in Europe Europe Since 1914 Civil Society in Europe A History of Modern Europe Rewilding European Landscapes

The first new edition since 1967 of this standard introductory textbook, this has been significantly rewritten and expanded, and fully revised. It deals with a crucial period of European history during which her economic and political domination of the world reached a climax and then crumbled. Social, economic and cultural aspects are integrated within a framework of political narrative, and the book aims to present major themes through sharp detail rather than abstract generalizations. The regulation of civil society provides the framework under which those organisations can most effectively provide services in education, health, social services, housing, development aid and so on. Civil Society in Europe identifies common principles of civil society law in two ways. First, the approaches of the Council of Europe and the European Union are explored. Next civil society regulation in twelve domestic legal systems are

investigated on a broad range of substantive areas of law including internal organisation, registration, external supervision, public benefit organisations and international activities. From these, the authors distill a set of minimum norms and optimal conditions under which civil society can deliver its aims most effectively. This book is essential reading for policymakers and legislators across Europe and beyond. A multi-volume survey of European history from the beginning of World War I in 1914 to the present, presented through alphabetically arranged entries that focus on the period's scientific, social and cultural history as well as the political, military and economic developments. For students and general readers. This account of developments in the modern era begins with the European Renaissance, and traces developments across the centuries of empire, industrial innovation, revolutions and world wars, through to the emergence of a fast-changing, inter-connected and non-Eurocentric world beset with environmental concerns. This text examines and critiques the work of a diverse group of Eurocentric historians who have strongly shaped our understanding of world history. It

provides invaluable insights and tools for readers across a range of disciplines. An illuminating and authoritative account, greatly expanded from a 13-part television series, of the history of western civilization from its earliest roots. J.M. Roberts uncovers what it was that gave European culture its confident energy for so many centuries while exposing its flaws and its irreversible impact on the rest of the world. From the Library of E. William Turley. In this vital new book, leading international scholars highlight the unique characteristics and rich variety of European research in entrepreneurship. They pursue several different perspectives and focus on the key issues and most significant developments in the field. This book contributes to the growth of interest in Content and Language Integrated Learning (CLIL), an approach to second/foreign language learning that requires the use of the target language to learn content. Within the framework of European strategies to promote multilingualism, CLIL has begun to be used extensively in a variety of language learning contexts, and at different educational systems and language programmes. This book brings together critical analyses on theoretical and implementation issues of Content and Language Integrated Learning, and empirical studies on the effectiveness of this type of instruction on learners' language competence. The basic theoretical assumption behind this book is that through successful use of the language to learn content, learners will develop

their language proficiency more effectively while they learn the academic content specified in the curricula. Some European lands have been progressively alleviated of human pressures, particularly traditional agriculture in remote areas. This book proposes that this land abandonment can be seen as an opportunity to restore natural ecosystems via rewilding. We define rewilding as the passive management of ecological successions having in mind the long-term goal of restoring natural ecosystem processes. The book aims at introducing the concept of rewilding to scientists, students and practitioners. The first part presents the theory of rewilding in the European context. The second part of the book directly addresses the link between rewilding, biodiversity, and habitats. The third and last part is dedicated to practical aspects of the implementation of rewilding as a land management option. We believe that this book will both set the basis for future research on rewilding and help practitioners think about how rewilding can take place in areas under their management. The Illustrated History of the World is a lavishly illustrated edition of J. M. Roberts's bestselling History of the World. Now completely revised and updated, each volume of this comprehensive reference work traces the tumultuous story of humankind from prehistory to the end of the 20th century. The rise and fall of civilizations; the impact of powerful individuals on world events; the interplay of state and religion; the social and economic

factors that influence societies--these are some of the themes of this masterful, sweeping narrative. Over 2,000 photographs in color and black-and-white present a unique visual panoply of the march of history. In addition, more than 200 maps and artworks in full color underscore important events. Fully integrated sidebars and feature boxes narrow in on key themes, providing an additional layer of interest. Each volume also contains a double-page, illustrated chronology of major events, plus a bibliography and detailed index. Authoritative, brilliantly written, and superbly illustrated, this outstanding and popular work of scholarship makes the whole sweep of history vivid and accessible as never before. A survey of the major events, developments, and personalities that have shaped human history. This dazzling overview of a turbulent century explores both dramatic events and underlying trends. Despite a terrible two-stage 'European civil war' and the traumatic rise and fall of communism, wealth has increased dramatically alongside a four-fold leap in population, women's lives have been transformed, America has assumed undisputed political and cultural leadership. The Penguin History of the Twentieth Century is powerful, international and definitive. Comprehensive in its scope and brilliantly readable, this is a superb follow-up to the author's bestselling Penguin History of the World. Beginning with prehistory and the early civilizations of the Aegean, The Penguin History of Europe traces the development of European

identity in its many guises, through the age of Christendom, the Middle Ages, early Modern history and the old European order. This book introduces readers to new historical research on the creation of the new order in East-Central Europe in the period immediately following 1918. Taking a step towards writing a fully European history of the Great War and its aftermath, the volume offers an original approach to this decisive period in 20th century European history. "A fascinating and highly readable account of humankind's development over 10,000 years in a brilliantly illustrated volume by one of the world's most distinguished historians." -- Publisher's website. This book is designed as a modest contribution to the ongoing deliberations about how to ease the fairly tight constraints on the external payments of many countries of the eastern part of Europe. In the first instance, this inquiry is addressed to those that have embarked on wide-ranging systemwide reforms. External constraints have been markedly hampering the introduction of market oriented economic mutations, thereby raising the cost of transition far above levels expected at the outset of the present wave of uniquely restructuring the countries involved. I explore here several angles of this discussion. But three stand out. One is the disintegration of the postwar framework for economic cooperation in that part of the world. Another is the disarray brought about by incisive economic transformations in the area. Finally, various

national, regional, and international interest groups are at work there, hoping to mold somehow the drift of the reform, or at least key components thereof, in their own "image." In the process it is often forgotten, as Ralf Dahrendorf (1990, p. 41) so pointedly remarked that "[a]ll systems mean serfdom, including the 'natural' system of a total market order' in which no one tries to do anything other than guard certain rules of the game discovered by a mysterious sect of economic advisers. Chronologically discusses the events of history beginning with the evolution of man and ending with the restructuring of Western Europe in 1993. A superb history of the world's people during the last four million years, beginning before the human race moved out of Africa to explore and settle the other continents. Mr. Blainey explores the development of technology and skills, the rise of major religions, and the role of geography, considering both the larger patterns and the individual nature of history. A delightful read, gracefully written, and full of odd and interesting pieces of information as well as thoughtful comparisons that span both time and space. —William L. O'Neill This influential book challenges one of the most pervasive and powerful beliefs of our time--that Europe rose to modernity and world dominance due to unique qualities of race, environment, culture, mind, or spirit, and that progress for the rest of the world resulted from the diffusion of European civilization. J. M. Blaut persuasively argues that this doctrine is not

grounded in the facts of history and geography, but in the ideology of colonialism. Blaut traces the colonizer's model of the world from its 16th-century origins to its present form in theories of economic development, modernization, and new world order. LONGLISTED FOR THE MAN BOOKER PRIZE A NEW YORK MAGAZINE BEST BOOK OF THE YEAR From the Nobel Prize-winning author J. M. Coetzee, the haunting sequel to *The Childhood of Jesus*, continuing the journey of David, Simón, and Inés. *The Death of Jesus* is forthcoming from Viking. "When you travel across the ocean on a boat, all your memories are washed away and you start a completely new life. That is how it is. There is no before. There is no history. The boat docks at the harbour and we climb down the gangplank and we are plunged into the here and now. Time begins." David is the small boy who is always asking questions. Simón and Inés take care of him in their new town, Estrella. He is learning the language; he has begun to make friends. He has the big dog Bolívar to watch over him. But he'll be seven soon and he should be at school. And so, with the guidance of the three sisters who own the farm where Simón and Inés work, David is enrolled in the Academy of Dance. It's here, in his new golden dancing slippers, that he learns how to call down the numbers from the sky. But it's here, too, that he will make troubling discoveries about what grown-ups are capable of. In this mesmerizing allegorical tale, Coetzee deftly grapples with the big questions of growing up,

of what it means to be a “parent,” the constant battle between intellect and emotion, and how we choose to live our lives. Suitable for 19th and 20th century Europe/modern Europe undergraduate courses. This well-established and immensely successful book provides a standard introduction to the subject by one of Britain's most popular historians. Social, economic and social history are skillfully integrated within a framework of political narrative history. This book provides an account of the development of European culture and society during the Bronze Age, the time span between c. 2000 and 700 BC. It was a period of remarkable innovation, seen for instance in the development and growth of metallurgy as a major industry, the spread of trading contacts, the origins of urbanism and the beginnings of social stratification. The study is divided chronologically into two, the earlier and later Bronze Age, giving a clear picture of the nature of the radical changes which occurred in the period as a whole. The geographical area covered, from the Atlantic shores across Europe into the Soviet Union and from northern Scandinavia to the Mediterranean, is too vast to be taken as one unit, and has been broken down into five regions; each is discussed in terms of settlement form, burial practices, ritual and religious sites, material culture, economic and social background, and trading patterns. The book describes and develops common themes that link together the different areas and

cultural groups, rather than taking the typographical approach often adopted by Bronze Age specialists, and uses the results of radiocarbon dating to establish an objective chronology for the period. The text is generously illustrated and fully documented with radiocarbon dating tables and extensive bibliography. Our understanding of Bronze Age Europe is still increasing, but no other book of this scope had been written before this, in 1979. It is a major study of its time of interest to anyone looking beyond popular accounts of the day. Exotic cultures, strange lands, and proud monarchies confronted the Portuguese and Spaniards who came to South-East Asia in the sixteenth century with the practical objectives of securing control of the profitable trade in export of spices to Europe, and - to a lesser extent - of combating Islam, their traditional foe in the Mediterranean. The pursuit of commercial and strategic advantages brought the Dutch, English, and French on their heels. Later still, the nineteenth century saw the arrival of explorers seeking to discover the sources of the great rivers of the region, naturalists who ranged far afield to collect specimens, and literary travellers, professional photographers, married women, and other visitors who recorded their experiences. This anthology offers selections from the abundant range of European writing, expressing the fascination, the excitement, and sometimes the violence or danger of personal adventures and encounters in South-East Asia. It is the work of

a talented minority who found delight in a strange world of their time, a world which is rapidly changing and vanishing. These writers have left a vivid record for the entertainment of the modern reader. Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience). Available in both one-volume and two-volume paperback editions, *A History of Modern Europe* presents a panoramic survey of modern Europe from the Renaissance to the present day. A single author lends a unified approach and consistent style throughout, with an emphasis on the connections of events and people over time. The Third Edition, like the two before it, is authoritative and up-to-date. New to the Third Edition is the theme of empire. From the imperial rivalries between France and Spain in the sixteenth and seventeenth centuries, through the rise and fall of the Ottoman Turkish

empire, and on into the imperial history of the twentieth century--decolonization, the spread of the Soviet empire, and the imperial power of the United States--the theme of empire helps students find commonalities among the events of European history. One of the most extraordinary history bestsellers on the Penguin list, John Roberts's book has now been updated by Odd Arne Westad to make sure it keeps its amazing appeal to a new generation of readers. 'A stupendous achievement ... the unrivalled World History for our day. It extends over all ages and all continents. It covers the forgotten experiences of ordinary people as well as chronicling the acts of those in power. It is unbelievably accurate in its facts and almost incontestable in its judgements' A. J. P. Taylor, Observer Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. Frank van Vree is an historian and professor of journalism at the University of Amsterdam. Jay M. Winter is

the Charles J. Stille Professor of History at Yale. -- The private law of the Member States of the European Union has become more and more 'European'. The fact that the European Union is making ever more use of directives as an instrument to achieve private law goals, is, in this context, not the most important development. Of much more substance is the fact that one increasingly realises that a uniform European private law has to be created, in one way or another, in the near future, if a truly common European market is to function at all. Over the last decade, Europe has witnessed the emergence of a vigorous debate about the need for and the feasibility of a future European *ius commune* in the field of private law. This book critically discusses this debate and provides a systematic overview of the various initiatives taken and describes the fragmentary European private law that already exists (by way of European directives, international conventions, etc.). In addition, the author aims at making a contribution to the debate by suggesting that the experience (good or bad) of the so-called 'mixed legal systems' is of great importance to the European private law venture and to the development of a uniform private law for Europe. This idea is supported by insights from Law & Economics and illustrated by South African law in particular. This idea of 'European private law as a mixed legal system' is then applied to the law of contracts, torts and property. This book takes up the challenge to give a critical

examination on the various methods of creating this *ius commune*. A detailed table of contents, list of abbreviations, bibliography, table of cases and index complete the book and make it a valuable study for everyone interested in European private law. Based on empirical analysis using configuration theory and multi-dimensional scaling, this book provides insight into types of relationships that can be found between groups of countries with certain institutional context features, and into the quality and equity of their education system. In this volume, the authors take up the challenge of considering what a European 'settlement' might look like. In doing so, they take into account worldwide trends and the increasing evidence of convergence across educational systems. The outcomes of comparative analyses seem to suggest that strong education systems in terms of finance, governance and choice could be preferable. To a greater or lesser extent, therefore, all the systems of education currently in use in Europe face some common challenges. The way in which these challenges are addressed will determine the future of these systems. Key elements in the current debate that are considered in greater detail in this volume include changing views on (a) centre-local relations with signs of an increasing commitment to decentralisation as a guiding principle for developing school governance; (b) school autonomy which is now increasingly regarded as the engine-room for school improvement, especially in relation to

sustaining it; and (c) the celebration of community and school choice as a means of securing higher levels of parental involvement. This volume will be of interest to researchers and practitioners working in education, educational research and sociology of education. It will also be of relevance to those interested in the comparison of various education systems and in governance, funding of education and school choice.
