Recounts the fake news stories, written from 1830 to 1880, about scientific and technological discoveries, and the effect these hoaxes had on readers and their trust in science. The Earth Charter is a declaration of fundamental ethical principles for building a just, sustainable and peaceful global society, with ecological integrity as a major theme. This book provides a series of analyses of ecological integrity as it relates to the Earth Charter, social movements and international law for human rights. It is shown how the Earth Charter project began as a United Nations initiative, but it was carried forward and completed by a global civil society initiative. The drafting of the Earth Charter involved the most inclusive and participatory process of its time ever associated with the creation of an international declaration. This process is the primary source of its legitimacy as a guiding ethical framework. The Earth Charter was finalized and then launched in 2000 and its legitimacy has been further enhanced by its endorsement by over 6,500 organizations, including many governments and international organizations. In the light of this legitimacy, an increasing number of international lawyers recognize that the Earth Charter is acquiring the status of a soft law document. The book also shows the strong connection between ecological integrity and social justice, particularly in the defence of indigenous people, and includes contributions from both the North and the global South, specifically from Central and South America. Bastardi's love for the weather and climate drove him to write *The Climate Chronicles*, an expose' of the true climate

change agenda. By drawing on many of the over 150 blogs and articles he has written on the matter, he shows how weather and climate are being weaponized, politicized, and in reality distorted by academia, media and even religious leaders to advance a cause that is counter to our nation's best interests, A must-read for anyone that loves weather and climate, and the freedoms that are being attacked in our country today, and is curious enough to question what they are being told. This is a college ruled composition notebook for anyone who loves simple facts about our planet that prove the hysteria around carbon dioxide (CO₂) is a misguided (or worse) mass delusion. The simple truth is, it is an anti-science and anti-human cult movement that must be resisted! Inside this paperback cover with a glossy finish you'll find: 100 blank pages with college ruled lines high quality white paper interior Calvin Fray is also the author of the best-selling book Climate Change Reality Check: Basic Facts that Quickly Prove the Global Warming Crusade is Wrong and Dangerous. In less than 30 minutes you'll learn and understand why the assault on CO₂ and human-induced "climate change" is the biggest and most dangerous fraud against humanity this century. And you'll have the facts and arguments to prove it to others too! The cover illustration on this notebook speaks for itself. Carbon dioxide is a trace gas, less than 0.04% of our atmosphere. Making comparisons to poison in water (a typical response) is an ignorant analogy that only proves a lack of rational thought. But we encourage you to educate yourself with more facts and logic so you can resist the climate change anti-science, anti-human cultists. The New York Times-bestselling "skeptical environmentalist" argues that panic over climate change is causing more harm than good Hurricanes batter our coasts. Wildfires rage across the American West. Glaciers collapse in the Artic. Politicians, activists, and the media espouse a common message: climate change is destroying the planet, and we must take drastic action immediately to stop it. Children panic about their future,

sfjff36.jfi.org

and adults wonder if it is even ethical to bring new life into the world. Enough, argues bestselling author Bjorn Lomborg. Climate change is real, but it's not the apocalyptic threat that we've been told it is. Projections of Earth's imminent demise are based on bad science and even worse economics. In panic, world leaders have committed to wildly expensive but largely ineffective policies that hamper growth and crowd out more pressing investments in human capital, from immunization to education. False Alarm will convince you that everything you think about climate change is wrong -- and points the way toward making the world a vastly better, if slightly warmer, place for us all. Focusing on literature and visual art in the years 1910-1935, Modernist Fraud begins with the omnipresent accusations that modernism was not art at all, but rather an effort to pass off patently absurd works as great art. These assertions, common in the time's journalism, are used to understand the aesthetic and context which spawned them, and to look at what followed in their wake. Fraud discourse ventured into the aesthetic theory of the time, to ideas of artistic sincerity, formalism, and the intentional fallacy. In doing so, it profoundly shaped the modern canon and its justifying principles. Modernist Fraud explores a wide range of materials. It draws on reviews and newspaper accounts of art scandals, such as the 1913 Armory Show, the 1910 and 1912 Postimpressionist shows, and Tender Buttons; to daily syndicated columns; to parodies and doggerel; to actual hoaxes, such as Spectra and Disumbrationism; to the literary criticism of Edith Sitwell; to the trial of Brancusi's Bird in Space; and to the contents of the magazine Blind Man, including a defense of Duchamp's Fountain, a poem by Bill Brown, and the works of, and an interview with, the bafflingly unstable painter Louis Eilshemius. In turning to these materials, the book reevaluates how modernism interacted with the public and describes how a new aesthetic begins: not as a triumphant explosion that initiates irrevocable changes, but as an uncertain

muddling and struggle with ideology. Traces the origins of the climate scare, guiding the reader from the minds of Marx and Engles in the 1800s, to the global governance of the United Nations.

WANT ACCESS TO SOLID SCIENTIFIC FACTS REFUTING THE INCESSANT MEDIA HYPE SURROUNDING CLIMATE CHANGE? THEN THE MYTHOLOGY OF GLOBAL WARMING IS FOR YOU! The Mythology of Global Warming is intended to provide the general public with a broad spectrum of scientific and factual information on the subject of Climate Change. This book debunks the incessant, emotional, and largely unsubstantiated claims made by the progressive media and climate scientists that industrial societies such as the United States are destroying our planet due to the use of fossil fuels. What causes global warming? What is a greenhouse gas? What impact do carbon dioxide emissions from fossil fuels actually have on the Earth's climate relative to naturally occurring phenomena? Is all ice on Earth really melting, and are sea levels rising at a catastrophic rate? Are all forms of extreme weather, including hurricanes, tornadoes, floods, and droughts increasing dramatically? Are polar bears and other life forms being pushed to the brink of extinction? Will all of this mayhem cease if fossil fuels are replaced by 'green' renewable energy sources? Answers to these questions clearly show that hard facts do not support any of the above dire predictions. The science of global warming is indeed 'settled'; Global Warming is a myth.

..".Global warming proponents can't prove that man is destroying the planet due to global warming, but Dr. Bunker can prove that we are not. He packs a lot of punch in this small package. Read it, and arm yourself for the great debate."---Phil Valentine, nationally syndicated talk show host of the Phil Valentine Show on Westwood One "In the past 20 years I have reviewed two dozen books dealing with Anthropomorphic Global Warming. There has not been nor ever will be a more comprehensive and understandable book on this subject which is to critical to the entire world's population."--Jay

Lehr, Ph.D. Science Director, The Heartland Institute "This is a scholarly work written by a true scientist, yet in a way that makes the topic still accessible to the average person interested in understanding both the science and also the politics of global warming. Highly recommended."--Dr. Jennifer Marohasy, Senior Fellow, Australia's Institute of Public Affairs, co-author of "Climate Change: The Facts, 2014" "Unlike so many others, Dr. Bunker's book is so much more than a supposition wrapped up in a pretty bow of meaningless numbers. If you've been waiting for a book that gives actual facts in an easily checked form, you've found it."--G. Dedrick Robinson Ph.D., co-author of Global Warming: Alarmists, Skeptics & Deniers. "A timely and well researched book not only for the thoughtful engaged reader, but also for the general public. The book is up-to-date and deals honestly with continuing controversies and uncertainties."--Dr. Sonja A. Boehmer-Christiansen, Department of Geography, Hull University, Former Editor, Energy & Environment. Can we change the minds of science deniers? Encounters with flat earthers, anti-vaxxers, coronavirus truthers, and others. "Climate change is a hoax--and so is coronavirus." "Vaccines are bad for you." These days, many of our fellow citizens reject scientific expertise and prefer ideology to facts. They are not merely uninformed--they are misinformed. They cite cherry-picked evidence, rely on fake experts, and believe conspiracy theories. How can we convince such people otherwise? How can we get them to change their minds and accept the facts when they don't believe in facts? In this book, Lee McIntyre shows that anyone can fight back against science deniers, and argues that it's important to do so. Science denial can kill. Drawing on his own experience--including a visit to a Flat Earth convention--as well as academic research, McIntyre outlines the common themes of science denialism, present in misinformation campaigns ranging from tobacco companies' denial in the 1950s that smoking causes lung cancer to today's anti-vaxxers. He describes attempts to use his

persuasive powers as a philosopher to convert Flat Earthers; surprising discussions with coal miners; and conversations with a scientist friend about genetically modified organisms in food. McIntyre offers tools and techniques for communicating the truth and values of science, emphasizing that the most important way to reach science deniers is to talk to them calmly and respectfully--to put ourselves out there, and meet them face to face. To "save our planet (Earth)" from global warming, this book spreads alarming misinformation that we must reduce carbon dioxide emissions by switching from hydrocarbon fuels to renewable energies. This exposes the truth that the climate change hoax is a political movement aimed at eliminating capitalism. Exposing climate lies in an age of misinformation: The Reality about Energy, Changing Climate, Worldwide Warming tends to expose us to the scientific knowledge of Earth's climate and temperature that Green New Deal proponents are attempting to conceal. You will find several truths that the extreme left disputes supported by scientific documentation in the pages of this book. Interested in learning the real workings of energy, temperature, and climate? The Reality about Energy, Climate Change and Worldwide Warming should be read, but be prepared to be astonished. Daniel E. Hepner has performed a masterful analysis of peer-reviewed climate research that reveals that clean energy in the changing global energy is responsible for the anti-capitalist global warming fraud of today. Simply clicking the BUY NOW button will enable you to get access to the shocking content of this book. SYNOPSIS-V6 The world is not ready for electric cars. Yet billions of taxpayer dollars have been squandered by our government on 'green' projects. Some feel that conversion to electric would be an advancement. It would not. Billions of dollars have been spent developing two types of extremely expensive electric cars; electric only and hybrids. The latter have a small gasoline engine to charge the battery. In both types, their \$2,500 batteries have to be replaced every two years.

Their four hour charging time is much too long for refilling at service stations. A massive infrastructure of grids and power stations would have to be built. The major problems with these cars and infrastructure are explained in this book. Hybrid cars are designed to run on both electricity and gasoline. Electric 'only' cars have no backup electric generators. The majority of the problems encountered lie in the support equipment and climate. The problems with the car themselves are listed in the book. The term 'global warming' was hastily changed to "climate change" when it was discovered that the earth was not really getting warmer. Proponents of global warming claim that CO₂ (carbon di-oxide) forms a layer in the stratosphere which reflects heat rays from the earth downwards thereby creating a greenhouse and raising the temperature of the earth. There is absolutely no practical reason for believing that this actually happens. But this is the reason given by environmentalists for eliminating CO₂. But this theory collapses like a house of cards when it is put to the test of reality. Air and CO₂ are miscible gases (which means they dissolve into one another) forming one homogeneous gas. Thus there can be no layer of carbon di-oxide in the stratosphere (neither man made nor naturally occurring) which is the mainstay of that warming theory. Reflection cannot occur within a homogenous. No layer - no reflection. No reflection - no greenhouse. No greenhouse - no global warming or climate change. There can be no argument. Yet billions of taxpayer dollars have been spent picking winners and losers (as of now, all losers). So there is no point in making equipment that does not exude CO₂ because CO₂ is not a problem in the first place. CO₂ is an inert gas. Humans exhale it when breathing. To make the 'culprit' more tangible they refer to it as 'carbon'. "Carbon emission" appears so much more threatening than "CO₂ emission". The chapter on "CLIMATE CHANGE" deals with this subject exhaustively. It takes the reader step by logical step in layman's terms to the only possible conclusion; even if the climate is

changing, it is not carbon dioxide that can possibly be the culprit. The power required to drive all the electric cars has to come from somewhere. ALTERNATE SOURCES OF ENERGY, other than NUCLEAR, have insurmountable limitations on continuity of supply and all are more expensive than gasoline. They cannot be used as primary generators. For instance, SOLAR units do not work in the dark or on cloudy days, WINDMILLS do not work in still weather and WATERFALLS freeze in winter in some geographical areas. Details of their advantage and shortcomings are included in this book.

Are you at risk of being scammed? Former con artist and bestselling author of *Catch Me If You Can* Frank Abagnale shows you how to stop scammers in their tracks. Maybe you're wondering how to make the scam phone calls stop. Perhaps someone has stolen your credit card number. Or you've been a victim of identity theft. Even if you haven't yet been the target of a crime, con artists are always out there, waiting for the right moment to steal your information, your money, and your life. As one of the world's most respected authorities on the subjects of fraud, forgery, and cyber security, Frank Abagnale knows how scammers work. In *Scam Me If You Can*, he reveals the latest tricks that today's scammers, hackers, and con artists use to steal your money and personal information--often online and over the phone. Using plain language and vivid examples, Abagnale reveals hundreds of tips, including:

- The best way to protect your phone from being hacked
- The only time you should ever use a debit card
- The one type of photo you should never post on social media
- The only conditions under which you should use WiFi networks at the airport
- The safest way to use an ATM

With his simple but counterintuitive rules, Abagnale also makes use of his insider intel to paint a picture of cybercrimes that haven't become widespread yet. The instant New York Times bestseller that reveals the collusion between Fox News and Donald Trump—with explosive new reporting covering the election and the January 6 riot. As the nation recovers from the Trump

presidency, many questions remain: Why was the COVID-19 pandemic so grossly mishandled? How did we get so politically polarized? What caused white nationalist groups to come out of the shadows, and are they here to stay? The answers lie the twisted story of the relationship between Donald Trump and Fox News. Through firsthand accounts from over 250 current and former Fox insiders, CNN anchor and chief media correspondent Brian Stelter unlocks the inner workings of Rupert Murdoch's multibillion-dollar media empire. The confessions are shocking: "We don't really believe all this stuff," a producer says. "We just tell other people to believe it." Stelter completes the story of the Trump years and looks toward the future of the network that made him. Hoax is a book for anyone who reads the news and wonders how we got here, and what happens next. "Unsettled is a remarkable book—probably the best book on climate change for the intelligent layperson—that achieves the feat of conveying complex information clearly and in depth." —Claremont Review of Books "Surging sea levels are inundating the coasts." "Hurricanes and tornadoes are becoming fiercer and more frequent." "Climate change will be an economic disaster." You've heard all this presented as fact. But according to science, all of these statements are profoundly misleading. When it comes to climate change, the media, politicians, and other prominent voices have declared that "the science is settled." In reality, the long game of telephone from research to reports to the popular media is corrupted by misunderstanding and misinformation. Core questions—about the way the climate is responding to our influence, and what the impacts will be—remain largely unanswered. The climate is changing, but the why and how aren't as clear as you've probably been led to believe. Now, one of America's most distinguished scientists is clearing away the fog to explain what science really says (and doesn't say) about our changing climate. In *Unsettled: What Climate Science Tells Us, What It Doesn't, and Why It Matters*, Steven Koonin draws upon his

decades of experience—including as a top science advisor to the Obama administration—to provide up-to-date insights and expert perspective free from political agendas. Fascinating, clear-headed, and full of surprises, this book gives readers the tools to both understand the climate issue and be savvier consumers of science media in general. Koonin takes readers behind the headlines to the more nuanced science itself, showing us where it comes from and guiding us through the implications of the evidence. He dispels popular myths and unveils little-known truths: despite a dramatic rise in greenhouse gas emissions, global temperatures actually decreased from 1940 to 1970. What's more, the models we use to predict the future aren't able to accurately describe the climate of the past, suggesting they are deeply flawed. Koonin also tackles society's response to a changing climate, using data-driven analysis to explain why many proposed "solutions" would be ineffective, and discussing how alternatives like adaptation and, if necessary, geoengineering will ensure humanity continues to prosper. Unsettled is a reality check buoyed by hope, offering the truth about climate science that you aren't getting elsewhere—what we know, what we don't, and what it all means for our future. The uproarious, bestselling true story of the world's most sought-after con man, immortalized by Leonardo DiCaprio in DreamWorks' feature film of the same name, from the author of Scam Me If You Can. Frank W. Abagnale, alias Frank Williams, Robert Conrad, Frank Adams, and Robert Monjo, was one of the most daring con men, forgers, imposters, and escape artists in history. In his brief but notorious criminal career, Abagnale donned a pilot's uniform and copiloted a Pan Am jet, masqueraded as the supervising resident of a hospital, practiced law without a license, passed himself off as a college sociology professor, and cashed over \$2.5 million in forged checks, all before he was twenty-one. Known by the police of twenty-six foreign countries and all fifty states as "The Skywayman," Abagnale lived a sumptuous life on the lam—until

the law caught up with him. Now recognized as the nation's leading authority on financial foul play, Abagnale is a charming rogue whose hilarious, stranger-than-fiction international escapades, and ingenious escapes—including one from an airplane—make *Catch Me If You Can* an irresistible tale of deceit. Could everything we know about fossil fuels be wrong? For decades, environmentalists have told us that using fossil fuels is a self-destructive addiction that will destroy our planet. Yet at the same time, by every measure of human well-being, from life expectancy to clean water to climate safety, life has been getting better and better. How can this be? The explanation, energy expert Alex Epstein argues in *The Moral Case for Fossil Fuels*, is that we usually hear only one side of the story. We're taught to think only of the negatives of fossil fuels, their risks and side effects, but not their positives—their unique ability to provide cheap, reliable energy for a world of seven billion people. And the moral significance of cheap, reliable energy, Epstein argues, is woefully underrated. Energy is our ability to improve every single aspect of life, whether economic or environmental. If we look at the big picture of fossil fuels compared with the alternatives, the overall impact of using fossil fuels is to make the world a far better place. We are morally obligated to use more fossil fuels for the sake of our economy and our environment. Drawing on original insights and cutting-edge research, Epstein argues that most of what we hear about fossil fuels is a myth. For instance . . . Myth: Fossil fuels are dirty. Truth: The environmental benefits of using fossil fuels far outweigh the risks. Fossil fuels don't take a naturally clean environment and make it dirty; they take a naturally dirty environment and make it clean. They don't take a naturally safe climate and make it dangerous; they take a naturally dangerous climate and make it ever safer. Myth: Fossil fuels are unsustainable, so we should strive to use "renewable" solar and wind. Truth: The sun and wind are intermittent, unreliable fuels that always need backup from a reliable source of energy—usually fossil fuels. There

are huge amounts of fossil fuels left, and we have plenty of time to find something cheaper. Myth: Fossil fuels are hurting the developing world. Truth: Fossil fuels are the key to improving the quality of life for billions of people in the developing world. If we withhold them, access to clean water plummets, critical medical machines like incubators become impossible to operate, and life expectancy drops significantly. Calls to “get off fossil fuels” are calls to degrade the lives of innocent people who merely want the same opportunities we enjoy in the West. Taking everything into account, including the facts about climate change, Epstein argues that “fossil fuels are easy to misunderstand and demonize, but they are absolutely good to use. And they absolutely need to be championed. . . . Mankind’s use of fossil fuels is supremely virtuous—because human life is the standard of value and because using fossil fuels transforms our environment to make it wonderful for human life.” This volume examines the phenomenon of fake news by bringing together leading experts from different fields within psychology and related areas, and explores what has become a prominent feature of public discourse since the first Brexit referendum and the 2016 US election campaign. Dealing with misinformation is important in many areas of daily life, including politics, the marketplace, health communication, journalism, education, and science. In a general climate where facts and misinformation blur, and are intentionally blurred, this book asks what determines whether people accept and share (mis)information, and what can be done to counter misinformation? All three of these aspects need to be understood in the context of online social networks, which have fundamentally changed the way information is produced, consumed, and transmitted. The contributions within this volume summarize the most up-to-date empirical findings, theories, and applications and discuss cutting-edge ideas and future directions of interventions to counter fake news. Also providing guidance on how to handle misinformation in an age of

“alternative facts”, this is a fascinating and vital reading for students and academics in psychology, communication, and political science and for professionals including policy makers and journalists. In his playful yet deeply serious third novel Jaspreet Singh links a fossil fraud in India, an ice core archive in Canada, and a climate change laboratory in Germany. Jaspreet Singh's much anticipated third novel traces a past crime that suddenly becomes confrontable on another continent. Lila, a brilliant Indian-born science journalist, and Lucia, an aspiring European-born writer, meet at a creative writing workshop in Calgary. Both try to use fiction to work through real-life trauma, but their entangled paths may reach all the way back to Lila's time as a geology student in the foothills of the Himalayas. How best to tell Lila's story and follow the links between a fossil fraud in India, an ice core archive in Canada, the Burgess Shale quarry, and a climate change laboratory in Germany? As their detective work unfolds, the two women encounter some of today's most urgent and fascinating science, as well as the many shapes of internal criticism in the sciences. They also come face to face with ecological grief and human-non-human entanglements. With this playful and deeply serious genre-blurring work, Singh gives a new direction to the novel in the Anthropocene. Some assumptions about biology are so deeply rooted in our thinking that they seem beyond question. These concepts - expressed in playful jargon - are our sacred bovines. With a light-hearted spirit, Douglas Allchin sets out to challenge many of these common beliefs about science and life. Allchin draws on fascinating insights from science to illustrate the ironies in many widespread beliefs. Be prepared to challenge the notion that male and female are fixed natural categories. Or that evolution implies cutthroat competition in human society. Or that we struggle against a fundamental immoral nature. Or that genes establish our identity. Or that science progresses through rare leaps of genius. Or that politics and emotions inevitably taint good science. Sacred Bovines revels in revelations

about the nature of science. Reflecting on the many errors in commonly accepted, everyday ideas also fosters creative thinking. How do we challenge assumptions? How do we "think outside the box"? The many examples here provide inspiration and guidance, further elaborated in a retrospective epilogue. An additional "Afterword for Teachers" highlights how the essays can foster learning about the nature of science and describes some practical classroom strategies. In *Fraud and Misconduct in Research*, Nachman Ben-Yehuda and Amalya Oliver-Lumerman introduce the main characteristics of research misconduct, portray how the characteristics are distributed, and identify the elements of the organizational context and the practice of scientific research which enable or deter misconduct. Of the nearly 750 known cases between 1880 and 2010 which the authors examine, the overwhelming majority took place in funded research projects and involved falsification and fabrication, followed by misrepresentation and plagiarism. The incidents were often reported by the perpetrator's colleagues or collaborators. If the accusations were confirmed, the organization usually punished the offender with temporary exclusion from academic activities and institutions launched organizational reforms, including new rules, the establishment of offices to deal with misconduct, and the creation of re-training and education programs for academic staff. Ben-Yehuda and Oliver-Lumerman suggest ways in which efforts to expose and prevent misconduct can further change the work of scientists, universities, and scientific research. An exposé of some of the more controversial agendas behind global warming argues that poor-quality science and dishonest politics are contributing to the intentionally disproportionate and self-serving levels of fear. Exactly 70 years after the end of the Nazi dictatorship, preparations are underway--largely unnoticed or misinterpreted by unsuspecting contemporaries--for the establishment of a fascist world government which would exceed Hitler's most audacious dreams. In place of the discredited

doctrine of eugenics, which provided the pretense then for the elimination of so-called "inferior races," today it is the swindle of alleged anthropogenic climate change which supplies the argumentation to establish a global eco-dictatorship whose results, and whose declared intention is to eliminate six billion human beings--if it is not stopped. --from the Introduction by Helga Zepp-LaRouche Report Contents: INTRODUCTION Defend Mankind from the Satanic Climate-Change Swindle by Helga Zepp-LaRouche I. DEPOPULATION PLOT: BRITISH SATANISTS CAPTURE THE VATICAN How the British Turned Genocide and Race Science 'Green' by Jeffrey Steinberg British Crown's Depopulation Pope: CBE Hans Joachim Schellnhuber The Encyclical from Hell by Paul Gallagher Prince Philip: Founding Father of the Environmentalist Movement by Alicia Cerretani Interview with Paul Driessen: Develop the Ultimate Resource--The Mind II. THE TRUE SCIENCE OF CLIMATE Temperature Doesn't Follow CO2 As Alarmists Claim by Benjamin Deniston What Causes Climate Change? The Sun, the Solar System, and the Galaxy by Benjamin Deniston 'Methods' of Climate Alarmists by Benjamin Deniston III. REJECT 'DECARBONIZATION' FRAUD Increasing Energy Flux-Density: The Only Competent Energy Policy by Benjamin Deniston Germany: Case Study in the Failure of Green Energy by Alicia Cerretani, Benjamin Deniston The Facts on Fusion by Liona Fan-Chiang, Benjamin Deniston Wall Street and London Made a 'Carbon Copy' of the Subprime Swindle by Paul Gallagher U.S. 'Green Disease' Spread After Kennedys and King Were Eliminated by Marcia Merry Baker Environmental extremists claim that a consensus of scientists agree that humans are causing climate change that will cause catastrophic damage to the planet if we do not immediately enact laws and practices to stop it. But those who believe this cannot explain scientific reasons to support it. In fact, the science does not support it--not the "human-caused" part, not the catastrophic damage part, and especially not the assertion that most scientists agree with it.

The claim that humans are causing catastrophic climate change is a hoax. The Climate Change Hoax Argument reveals and discusses the history of the hoax and the science that refutes it. Hundreds of renowned scientists from around the world dispute the claims of the IPCC that human-caused climate change is an existential threat to the world. Here are three such statements: "[C]urrent alarm over carbon dioxide is mistaken. . . Fears about man made global warming are unwarranted and are not based on good science." --Dr. Will Happer Professor at the Department of Physics at Princeton University and Former Director of Energy Research at the Dept. of Energy The IPCC's assertion of consensus in support of its AGW claim is "really outrageous and unethical." --Dr. Brilliant AL Briggs, climate statistician and Assoc. Editor of Monthly Weather Review "worst scientific scandal in ... history ... When people come to know what the truth is, they will feel deceived by science and scientists." --Dr. Kiminori Itoh, environmental physical chemist (Japan) Environmental extremists insist that fossil fuels are destroying the earth by emitting too much CO₂ into the atmosphere. But they are wrong. Scientific studies confirm that continued use of fossil fuels is not causing global warming; is not causing rising sea levels; is not causing extreme weather; and is not causing more droughts, floods, wildfires, hurricanes, or tornadoes. Science has exposed the climate change hoax. IS GLOBAL WARMING A HOAX? Isn't it time you read the facts? The propaganda of man-made global warming has been promoted by those with a political agenda by suppressing the truth and spreading fear. In this effort they have recruited academics, media, environmental groups, governments, the United Nations, even religions. Scientific evidence supporting man-made global warming has now been investigated by scientists and found to be baseless. Examination of the data has revealed the theory of climate change for the propaganda it is, derived from erroneous data, junk science, even scientific fraud. Now, for the first time, the

American people have available to them an honest discussion of man-made global warming and climate change that is easily understood by those without a scientific background. The Layman's Guide describes in easily understood language the science refuting claims of climatic catastrophe resulting from the burning of fossil fuels. Using well-documented scientific facts, the Layman's Guide exposes the global warming hoax as an authoritarian assault on individual freedom. Liars--Al Gore, the United Nations, the New York Times. The global warming lobby, relentless in its push for bigger government, more spending, and more regulation, will use any means necessary to scare you out of your wits--as well as your tax dollars and your liberties--with threats of rising oceans, deadly droughts, and unspeakable future consequences of "climate change." In pursuing their anti-energy, anti-capitalist, and pro-government agenda, the global warming alarmists--and unscrupulous scientists who see this scare as their gravy train to federal grants and foundation money--resort to dirty tricks, smear campaigns, and outright lies, abandoning scientific standards, journalistic integrity, and the old-fashioned notions of free speech and open debate. In Red Hot Lies, bestselling author Christopher Horner--himself the target of Greenpeace dirty tricks and alarmist smears--exposes the dark underbelly of the environmental movement. Power-hungry politicians blacklist scientists who reject global warming alarmism. U.S. senators threaten companies that fund climate change dissenters. Mainstream media outlets openly reject the notion of "balance." The occasional unguarded scientist candidly admits the need to twist the facts to paint an uglier picture in order to keep the faucet of government money flowing. In the name of "saving the planet," anything goes. But why the nasty tactics? Why the cover ups, lies, and intimidation? Because Al Gore and his ilk want to use big government at the local, state, federal, and global level to run your life, and they can brook no opposition. But the actual facts, as Red Hot Lies makes clear, aren't nearly as scary as their

fiction. Marc Morano's analysis of the proposed Green New Deal is eye-opening and damning. In his new book, *Green Fraud: Why the New Green Deal Is Even Worse than You Think*, Morano exposes the program as a far-left agenda filled with progressive policies disguised as a way to save the planet. No matter what the environmental scare-of-the-day may be, Morano says, the same solution is always proposed -- and that solution should scare us. Morano clearly shows how the Green New Deal will lay a path for "global governance," resulting in less freedom, less sovereignty, massive government bureaucracy, and significant, crippling wealth redistribution. Drawing on past "new deals" to illustrate the impact such "deals" have on the United States, Morano will explain how FDR's New Deal and Lyndon Johnson's "Great Society" really impacted American society. And this latest big government program is no different. In *Green Fraud*, Morano reveals: How the Green New Deal's objectives extend far beyond the environment -- including free college; "healthy food" for all; "safe, affordable, adequate housing" provided by the government; and other far-left agenda items. That in Europe, where climate policies are years ahead of the United States, energy rationing, low economic growth, and rising costs are leading to misery and even death among Europeans. How even Green New Deal allies such as the *New York Times* and *Washington Post* have outed the legislation as a wish-list of progressive policies. How America can and must defeat the Green New Deal and restore sanity to the climate and energy policy discussion. Inhofer presents his perspectives and opinions on the proposed "carbon tax" and energy regulations currently part of the global warming debate among members of the Congress and the U.S. government. "Olmsted makes you insanely hungry and steaming mad--a must-read for anyone who cares deeply about the safety of our food and the welfare of our planet." —Steven Raichlen, author of the *Barbecue!* Bible series "The world is full of delicious, lovingly crafted foods that embody the terrain, weather, and culture of their origins.

Unfortunately, it's also full of brazen impostors. In this entertaining and important book, Olmsted helps us fall in love with the real stuff and steer clear of the fraudsters." —Kirk Kardashian, author of *Milk Money: Cash, Cows, and the Death of the American Dairy Farm* You've seen the headlines: Parmesan cheese made from wood pulp. Lobster rolls containing no lobster at all. Extra-virgin olive oil that isn't. So many fake foods are in our supermarkets, our restaurants, and our kitchen cabinets that it's hard to know what we're eating anymore. In *Real Food / Fake Food*, award-winning journalist Larry Olmsted convinces us why real food matters and empowers consumers to make smarter choices. Olmsted brings readers into the unregulated food industry, revealing the shocking deception that extends from high-end foods like olive oil, wine, and Kobe beef to everyday staples such as coffee, honey, juice, and cheese. It's a massive bait and switch in which counterfeiting is rampant and in which the consumer ultimately pays the price. But Olmsted does more than show us what foods to avoid. A bona fide gourmand, he travels to the sources of the real stuff to help us recognize what to look for, eat, and savor: genuine Parmigiano-Reggiano from Italy, fresh-caught grouper from Florida, authentic port from Portugal. Real foods that are grown, raised, produced, and prepared with care by masters of their craft. Part cautionary tale, part culinary crusade, *Real Food / Fake Food* is addictively readable, mouthwateringly enjoyable, and utterly relevant. Dr. Vincent Gray discusses and analyzes the science and politics of the Anthropogenic Global Warming (AGW) meme. Dr. Gray is a renowned scientist and voice of reason; he thoroughly debunks the crass manipulation and politicization of academic climate science. His well-documented book is a valuable contribution to the current debate between global warming activists and human-caused climate change skeptics. "The climate scare ends with this book." —SEAN HANNITY "This book arms every citizen with a comprehensive dossier on just how science, economics, and politics have been

distorted and corrupted in the name of saving the planet." —MARK LEVIN Less freedom. More regulation. Higher costs. Make no mistake: those are the surefire consequences of the modern global warming campaign waged by political and cultural elites, who have long ago abandoned fact-based science for dramatic fearmongering in order to push increased central planning. The Politically Incorrect Guide to Climate Change gives a voice -- backed by statistics, real-life stories, and incontrovertible evidence -- to the millions of "deplorable" Americans skeptical about the multibillion dollar "climate change" complex, whose claims have time and time again been proven wrong. How did one of the world's largest exporters of coal, gas and uranium end up with unreliable and expensive energy? Massive subsidies for renewable energy, gaming of the electricity market and government mandates have closed coal-fired generators that previously provided cheap reliable electricity. Five hundred years ago, Martin Luther objected to indulgences. Today indulgences are sought as subsidies from consumers for renewable energy generators in the name of the environmental religion. It has never been shown that human emissions of carbon dioxide drive global warming and the recent massive increases in emissions produced no warming. This book shows that renewable energy creates more environmental damage than coal-fired electricity generation and much of the generously funded climate "science" is underpinned by fraud. However, there is a simple solution to the suicidal energy policy which was created by pandering to green hysteria that forced upon us an unjustifiable commitment to renewable energy. This book is an exposure of the on-going greed, corruption, fiscal waste, skulduggery, moral and political ineptitude of governments and energy shysters the world over today. - Derek Wyness, reviewer Here is the antidote to the left's sinister push to use a worldwide crisis to infuse our lives with the values of colossal statism and dystopian self-hatred, all accelerated by the duplicitous manipulation of the recent pandemic. From

the nationally best-selling author of *The Politically Incorrect Guide to Climate Change*. Welcome to 2030. I own nothing, have no privacy, and life has never been better. This is the vision of the Great Reset, according to globalist leaders. While proponents of the Great Reset push slogans like “Build Back Better,” “The Fourth Industrial Revolution,” and “A New Normal,” the Reset is nothing short of a rebranded Soviet system, threatening to strip away property rights, restrict freedom of movement and association, and radically reshape our diets and way of life. In *The Great Reset: Global Elites and the Permanent Lockdown*, bestselling author and ClimateDepot.com publisher, Marc Morano, unveils the origins of the Great Reset, who is behind it, how it is being implemented, and how COVID-19 and the alleged “climate emergency” accelerated its imposition on the United States. Packed with telling statistics and damning quotes, *The Great Reset* is the essential handbook for the public, the media, and activists on how to critically analyze and expose the tyrannical policies silently strangling our liberties today. They used to call it “Global Warming” but the overwhelming scientific evidence against this spurious theory became too hotly debated, so it forced these same profiteers to change the banner to something more ambiguous; “Climate Change.” Of course the climate is always changing, so the hook was in! The global warming alarmists could now attach the flawed theory of man-made global warming to their newly propagandized “Climate Change” threat, and in so doing could more easily exploit the willfully ignorant, and corrupt political elite into cooperating in a multi-billion dollar scam... fueled by Fear and Deception. When one actually takes the time to investigate all the scientific evidence regarding the theory that human activity, mainly industrialized civilization, has presented a significant and negative impact on Earth's climate, one will quickly find that such claims are profoundly false. Equally disturbing is that it becomes abundantly clear that the real drive behind this fraudulent movement is about two age-old

motivators; Money and Control. A startling and authoritative look at the special-interest groups that have corrupted the climate change debate. 200 Pages / 500 Illustrations / In bold and certain defiance of "the great and the good" who continue to proclaim "Global Warming" to be "settled science," noted anti-Globalist author M S King aligns himself firmly and proudly in the camp of what the media refers to as "climate change deniers." What separates this work from that of so many other excellent books and documentaries which debunk the hoax of manmade "Global Warming" is that it provides a complete picture of the scam - one that not only encompasses the Fake Science, but also ties it into the public relations component and the historical geopolitical context which drives the "Climate Bogeyman." It is self-defeating to "respectfully disagree" with the warmists. Any respect afforded to that crowd implies that they, in the words of one "denialist" film maker, are "not evil, just wrong." To hell with pulling punches! These people need to be called out. Now there are indeed many innocent fools and dupes, including some scientists, who, under the influence of propaganda and "expert" authority, have obediently swallowed the dogmatic dung of "Global Warming" -- aka "Climate Change" -- and actually do believe in it. As for the inner circle movers and shakers behind the great scam; these EVIL conspirators know exactly what they are doing and they need to be placed on the defensive and called out not as fools or merely sloppy practitioners of science, but as the criminal hoaxsters that they and their invisible handlers truly are. Let's unmask this gigantic fraud. This non-fiction novel uncovers a massive scientific misconduct perpetrated since the 1880s by a cabal of smart but dishonest climatologists. They knew that climate is cyclical, but did not know why. To save their face, they used Callendar's CO2 theory of 1938, even though they also knew that this theory had been refuted by 30 years of global cooling between 1940 and 1970. To cover-up their mishandling, these climatologists have rigged the global temperature statistics to

match the anthropogenic narrative, removing almost all actual temperature data of this cooling period and replacing it with a 30-year relatively steady climate. Thus, the two warming periods 1910-1940 and 1970-2000 of the cyclical climate have been added up, creating the illusion of global warming. The scientist who performed this 20-year investigation is Bryan, founder and president of a scientific research center in a field unrelated to climatology. He is an outsider to climate science, and neither a climate supporter, a denier or a climate skeptic per se. He just has a curious mind and a knack for uncovering facts and perceiving patterns that are overlooked by others. In 2020, Bryan discovered cyclical climate variations by combining two temperature graphs, one published in 1975 by the National Research Council of the US National Academy of Science with statistics published by the Climatic Research Unit in 1913. The 1975 report was approved by the most trusted scientific source in climatology, evidence difficult to reject by anyone. Two other periods of deceit and cover-up are also detailed by Bryan's investigation. After 40 years, the cabal's lie has snowballed into today's climate scare. This book takes off the mittens and puts on the brass knuckles. Showing how Global Warming is the largest scientific and financial fraud in history. It is meant for readers on the political Left. And also meant for conservatives, Republicans, who want to explain Global Warming to their relatives, friends and co-workers on the Left. The author, Dr. Joel H. Glass is an engineer working in alternative energy for many years. His work includes all types of alternative energy such as hydropower, solar electric, wind turbines, and solar thermal heating. His alternative energy products are used in the USA, Canada, Malaysia, China, Israel, and the EU - Scandinavia. His solar thermal heater set world records for efficiency in solar heating. He is also a specialist in cold weather and how it effects infrastructure and living things. Having researched and worked in some of the coldest inhabited places on earth for many years. This book exposes the fraudulent science

behind Global Warming, and the fraudulent finance behind it. Hundreds of thousands of leading scientists recognize that Global Warming is a hoax. A New Ice Age is coming very soon, according to very solid scientific evidence of three types. The book also gives information what happens in Ice Ages, and how to prepare nationally and personally for it. Dr. Glass is also an accredited member of the press. Contrary to the opinions of Al Gore and the UN climatologists, CO2 concentration IS NOT the dominant influence on the global average temperature of the planet. This is why there is NO global climate crisis. -- For more than 30 years environmental activists have been blaming PEOPLE for causing global warming by driving cars, flying on jets, and just by living our lives. People use fossil fuels including oil, gas, and coal, which produces carbon dioxide (CO2), a colorless, odorless, nontoxic gas. Human's emit CO2 when we exhale. The earth's oceans, soil, plants, animals and volcanoes are all natural sources of CO2 emissions. -- Global warming, and at times global cooling has existed for more than 2.5 billion years. It is known as "climate variability". -- The earth has managed to start and end four massive ice ages during the last 2.4 billion years, all before there was any human existence on the planet. Civilized human beings have only existed for about 6,000 years, and human industrial CO2 emissions have occurred for only 170 +/- years. -- Read the facts about why CO2 is NOT causing global warming, and why it never will. It is even more important for you to understand why this hoax is being perpetuated! -- Global warming is not a climate issue. It is a political issue. Global warming is propaganda against God's creation, against American sovereignty, and against American Liberty! -- Arm yourself with the Facts in the blockbuster book "Inconvenient Facts, proving Global Warming is a Hoax", the Common Sense facts for the Basket of Deplorables. Are the often alarming claims about global warming based on science and justified by the facts? Is the human race really facing a major crisis due to emissions from fossil fuels? Would the proposed

Climate Treaty solve a real environmental threat or would it create worldwide economic and social harm? S. Fred Singer is a distinguished astrophysicist who has taken a hard, scientific look at the evidence. In this new book, Dr. Singer explores the inaccuracies in historical climate data, the limitations of attempting to model climate on computers, solar variability and its impact on climate, the effects of clouds, ocean currents, and sea levels on global climate, and factors that could mitigate any human impacts on world climate. Singer's masterful analysis decisively shows that the pessimistic, and often alarming, global warming scenarios depicted in the media have no scientific basis. In fact, he finds that many aspects of any global warming, such as a longer growing season for food and a reduced need to use fossil fuels for heating, would actually have a positive impact on the human race. Further, Singer notes how many proposed "solutions" to the global warming "crisis" (like "carbon" taxes) would have severe consequences for economically disadvantaged groups and nations. According to Arthur C. Clarke, author of *2001: A Space Odyssey*, *Hot Talk, Cold Science* dares to point out that 'the Emperor has no clothes.' Is there evidence to suggest discernible human influence on global climate? Of great interest, this book demonstrates that, at best, the evidence is sketchy and incomplete. *Hot Talk, Cold Science* is essential reading for anyone who wants to be fully informed about the global warming debate.
