Two hundred years ago herds of elk and antelope dotted the hills of the San Francisco-Monterey Bay area. Grizzly bears lumbered down to the creeks to fish for salmon and steelhead trout. From the vast marshlands, geese, ducks, and other birds rose in thick clouds "with a sound like that of a hurricane." This land of "inexpressible fertility," as one early explorer described it, supported one of the densest Indian populations in all of

North America. Clearly and accessibly written, uniquely alive and at the same time informed, this well-loved classic vividly recreates the lost world of the Indian people who lived here such a short time ago. Haynes offers the best coverage for cars, trucks, vans, SUVs and motorcycles on the market today. Each manual contains easy to follow step-by-step instructions linked to hundreds of photographs and illustrations. Included in every manual: troubleshooting section to help identify specific problems; tips that give valuable short cuts to make the job easier and eliminate the need for special tools; notes, cautions and warnings for the

home mechanic; color spark plug diagnosis and an easy to use index. Includes information on repair, replacement, and adjustment for popular American cars in production from 1940-1953. Unburdened by the material necessities of the more fortunate, the denizens of Cannery Row discover rewards unknown in more traditional society. Henry the painter sorts through junk lots for pieces of wood to incorporate into the boat he is building, while the girls from Dora Flood's bordello venture out now and then to enjoy a bit of sunshine. Lee Chong stocks his grocery with almost anything a man could want, and Doc, a young marine

biologist who ministers to sick puppies and unhappy souls, unexpectedly finds true love. Cannery Row is just a few blocks long, but the story it harbors is suffused with warmth, understanding, and a great fund of human values. First published in 1945, Cannery Row focuses on the acceptance of life as it is—both the exuberance of community and the loneliness of the individual. John Steinbeck draws on his memories of the real inhabitants of Monterey, California, and interweaves their stories in this world where only the fittest survive—creating what is at once one of his most humorous and poignant works. In Cannery

Row, John Steinbeck returns to the setting of Tortilla Flat to create another evocative portrait of life as it is lived by those who unabashedly put the highest value on the intangibles-human warmth, camaraderie, and love. We are pleased to present the proceedings of the 14th Monterey Workshop, which

took place September 10–13, 2007 in Monterey, CA, USA.

In this preface, we give the reader an overview of what took place at the workshop and introduce the contributions in this Lecture Notes in Computer Science volume. A complete introduction to the theme of the workshop, as well as to the history of the Monterey Workshop series, can be found in Luqi and Kordon's "Advances in Requirements Engineering: Bridging the Gap

between Stakeholders' Needs and Formal Designs" in this volume. This paper also contains the case study that many participants used as a problem to frame their analyses, and a summary of the workshop's results. The workshop consisted of three keynote talks, three panels, presentations of peer-reviewed papers, as well as presentations of various position papers by the participants. The keynote speakers at this year's workshop were Daniel Berry, Aravind Joshi, and Lori Clarke. Each of their talks was used to set the tone for the presentations and discussions for that particular day. Daniel

Berry presented an overview of the needs and challenges of natural language processing in requirements engineering, with a special focus on ambiguity in his talk "Ambiguity in Natural Language Requirements."

Aravind Joshi provided an overview of current natural language processing research in discourse analysis in the talk "Some Recent Developments in Natural Language Processing." Finally, Lori Clarke showed how to combine formal requirements specification with natural language processing to cope with the complex domain of medical information processes in "Getting the Details Right.
