(Computer Books) The institutional arrangements governing skill formation are widely seen as a key element

in the institutional constellations defining 'varieties of capitalism' across the developed democracies. This book explores the origins and evolution of such institutions in four countries - Germany, Britain, the United States and Japan. It traces cross-national differences in contemporary training regimes back to the nineteenth century, and specifically to the character of the political settlement achieved among employers in skill-intensive industries, artisans, and early trade unions. The book also tracks evolution and change in training institutions over a century of development, uncovering important continuities through putative 'break points' in history. Crucially, it also provides insights into modes of institutional change that are incremental but cumulatively transformative. The study underscores the limits of the most prominent approaches to institutional change, and identifies the political processes through which the form and functions of institutions can be radically reconfigured over

German companies. Beyond industrial specialization, peaceful labor relations, local financial markets and the "miracle of the Mittelstand", it focuses on a characteristic aspect of governance within the German economy: The Chambers of commerce and industry. Important characteristics of the Chamber system are emphasized - including obligatory membership for firms as well as participatory rules of their self-administration. In turn, the book examines the institution's self-governance, its services, and its mission regarding the general representation of interests. Moreover, the book also identifies the advancement of the dual system of professional education as a central element of the Chamber system. Following an introduction about how the Chamber system works, interviews, case studies and historical explanations help to exemplify the true spirit inherent to this form of representation. In particular, they reveal the essence of how the Chambers contribute to the

global success of German companies and foster their corporate responsibility in a practical way. Given its scope, the book will be of particular interest to professionals, policymakers and researchers concerned with how institutional organization can support commerce and industry for the public good.
